3 Method

Retrieval augmented generation combines a parametric language model with a non parametric retriever over an external corpus of documents to reduce hallucination and improve factual grounding for knowledge intensive tasks. Retrieval augmented generation combines a parametric language model with a non parametric retriever over an external corpus of documents to reduce hallucination and improve factual grounding for knowledge intensive tasks. Retrieval augmented generation combines a parametric language model with a non parametric retriever over an external corpus of documents to reduce hallucination and improve factual grounding for knowledge intensive tasks. Retrieval augmented generation combines a parametric language model with a non parametric retriever over an external corpus of documents to reduce hallucination and improve factual grounding for knowledge intensive tasks. Retrieval augmented generation combines a parametric language model with a non parametric retriever over an external corpus of documents to reduce hallucination and improve factual grounding for knowledge intensive tasks.

Table 1: Main results on the benchmark.

Method	Dataset	F1
BM25	LitSearch	42.1
Dense + rerank	LitSearch	58.6

4 Experiments

Retrieval augmented generation combines a parametric language model with a non parametric retriever over an external corpus of documents to reduce hallucination and improve factual grounding for knowledge intensive tasks. Retrieval augmented generation combines a parametric language model with a non parametric retriever over an external corpus of documents to reduce hallucination and improve factual grounding for knowledge intensive tasks. Retrieval augmented generation combines a parametric language model with a non parametric retriever over an external corpus of documents to reduce hallucination and improve factual grounding for knowledge intensive tasks. Retrieval augmented generation combines a parametric language model with a non parametric retriever over an external corpus of documents to reduce hallucination and improve factual grounding for knowledge intensive tasks. Retrieval augmented generation combines a parametric language model with a non parametric retriever over an external corpus of documents to reduce hallucination and improve factual grounding for knowledge intensive tasks. Retrieval augmented generation combines a parametric language model with a non parametric retriever over an external corpus of documents to reduce hallucination and improve factual grounding for knowledge intensive tasks.

5 Conclusion

Retrieval augmented generation combines a parametric language model with a non parametric retriever over an external corpus of documents to reduce hallucination and improve factual grounding for knowledge intensive tasks. Retrieval augmented generation combines a parametric language model with a non parametric retriever over an external corpus of documents to reduce hallucination and improve factual grounding for knowledge intensive tasks. Retrieval augmented generation combines a parametric language model with a non parametric retriever over an external corpus of documents to reduce hallucination and improve factual grounding for knowledge intensive tasks. Retrieval augmented generation combines a parametric language model with a non parametric retriever over an external corpus of documents to reduce hallucination and improve factual grounding for knowledge intensive tasks. Retrieval augmented generation combines a parametric language model with a non parametric retriever over an external corpus of documents to reduce hallucination and improve factual grounding for knowledge intensive tasks. Retrieval augmented generation combines a parametric language model with a non parametric retriever over an external corpus of documents to reduce hallucination and improve factual grounding for knowledge intensive tasks.

Limitations

This synthetic paper does not evaluate on out-of-domain benchmarks and leaves latency measurement to future work.

Future Work

Future work includes evaluating on additional scientific domains.
